

The Astronomical Link Between India and the Mayans

Abstract

We argue that there was a link between Indus Valley India and the Mayans of Central America which is brought out by astronomical references. The former used a Jovian calendar while the latter had perfected a calendar based on Venus. This will be shown to be a significant clue. This also provides an explanation for the as yet unexplained fact that the Indus script has been found on Easter Islands.

Over the past several decades, the Indian, more accurately Hindu influence on the Mayan civilization of Central America has been noted by many scholars [1]. It is unanimously agreed that there was direct or indirect contact over the centuries, through South East Asia, China and the Far East, though exactly when and how this took place is not as yet clear. As is well known, the Mayan civilization which goes back to about 2600 B.C., or earlier, had an advanced astronomy and calendar tradition[2].

We mention some of the Hindu influences [1, 3]:

1. Figures of the Hindu cosmic myth known popularly as the churning of the ocean are found in the Mayan documents. The astronomical significance of the myth has been explained in reference[4]. Infact a very early depiction of this myth is to be found in the Angkor Vat temple in present day Cambodia.
2. The Swastika symbol, interpreted by some as representing the cosmic cycle, was also present there.
3. Motifs of the lotus, elephant, sea goat and the like, unmistakably paint to

a Hindu influence.

4. Unmistakable architectural similarities and parallels exist, though, according to Hindu references, in this case it might well be the Mayan influence on Hindu architecture.

It is also interesting to note that the Mayan calendar began with a date around 3112 B.C., very close to the Hindu traditional beginning of the Kali age viz., 3102 B.C.[5, 6]. This period in India corresponds to the Indus valley or Harappan civilization which lasted for a few thousand years, atleast up to the first millennium B.C., or even later. The period around the first millennium B.C. is also the period of the epic Mahabharata. Marine archaeological researches in the Dwarka region of Western India put this period near 1500 B.C. [7]. Infact the Mahabharata period of India overlapped the Indus valley period[8]. Arjuna one of the heroes of the Mahabharata was a friend of Maya, an expert architect and he had also married a Naga princess, two facts, which, as will be seen now could be of significance. Maya himself is described as an Asura, as contrasted with Devas (literally bright ones), an other fact of significance.

The vast body of what are called Puranas, a combination of obscure history and mythology are clear on the point that the Devas or the bright ones and the Asuras, literally those who are deprived of the draught (of sun light), are really anti podal inhabitants on the earth, or more precisely those, whose longitude is separated by 180 degrees [9]. This is also explicitly spelt out by Varaha Mihira[10]. Around 500, Varaha Mihira compiled some of the then surviving ancient astronomical systems, and he mentions that when it is noon for the Devas, it is mid night for the Asuras, and that they stand with their heads down as compared to us, but that for them, we stand with our heads down and so on.

Significantly, according to the Puranas the Asuras were dictated to by the Planet Venus while the Devas were following the Planet Jupiter. Indeed the Indus valley calendar, as is well known was dictated by the Jovian cycles[11], a tradition which continues in India even today. The well known Kumbha Mela begins with the entry of Jupiter into Aquarius (Kumbha), and interestingly around 3000 B.C. and the beginning of the traditional Indian calendar, this event took place when in addition the Winter Solstice was also in Aquarius, a circumstance which could have contributed to the beginning of the calendaric epoch of that time.

On the other hand it is equally remarkable that the Central American Mayan

civilization was indeed anti podal, that is they would be Asuras, and moreover unlike any other known civilization they had a meticulous calendar dictated by the Planet Venus, as is documented in the Dresden Codex[2].

The Naga tribes alluded to above, have been associated with the Mayans and the netherworld or the Asuras or shorn of allegory, the anti podal world. Indeed the surviving Naga tribes of North Eastern India do share the mongloid features along with the Mayans. Interestingly the names and symbols for numerals of the Mayans and the ancient Naga tribes seem to be practically identical: Hun (1), denoted by a ., ca (2), denoted by .., Ox (3) denoted by ..., can/san (4) denoted by, ho (5) denoted by a horizontal bar and so on. It is also reported[12] that the ancient Mayas chronicled an invader from far off who was ambidextrous in his warrior skills, a description that exactly describes the hero Arjuna of Mahabharata -one of his epithets is Savya Sachi, or one who is equally adept with both hands. The significance of the liason between Arjuna and the Nagas can now be seen.

Thus the above arguments make a case for a contact between Indus valley India and the Mayan or a pre Mayan civilization (for example Olmec) of Central America sometime around 1400 B.C. Incidentally this would also give the answer to a long standing puzzle, namely evidence of the Indus script in the Easter islands which are enroute[13].
